## **AIMS MARK XII IDENTIFICATION FRIEND OR FOE**

### **EXECUTIVE SUMMARY**

This Navy Training System Plan (NTSP) identifies the manpower, personnel, and training requirements associated with the AIMS MK XII Identification Friend or Foe (IFF) system, hereafter referred to as the MK XII. The MK XII is a radar beacon system used by surface ships, submarines, aircraft, and ground forces to identify one another and to distinguish themselves from hostile and neutral forces. The MK XII system performs several different functions in support of various missions, such as anti-air warfare, aerial bombardment, naval bombardment, and naval attack. The MK XII also provides identification and altitude information for aircraft, a military and Federal Aviation Administration requirement for peacetime operational use of national airspace, and a Department of Defense requirement to maintain secure military identification. This NTSP addresses only the shipboard application of the MK XII.

Although mature, the MK XII continues to evolve as technology advances the capabilities of existing MK XII equipment and improved interface systems develop. The existing analog AN/UPX-25(V) and AN/UPX-27 Interrogators are being replaced by the AN/UPX-37 Digital Interrogator. The AN/UPX-37 Digital Interrogator is in the Operations and Support Phase of the Defense Acquisition System. Initial Operational Capability (IOC), Navy Support Date (NSD), and Material Support Date (MSD) for the AN/UPX-37 were achieved in December 2000. Additionally, existing analog AN/UPX-28, AN/APX-64, AN/APX-72, and AN/APX-100 Transponder Sets are being replaced by the new Common IFF Digital Transponder (CXP). The CXP is a Commercial Off-The-Shelf, Non-Developmental, Acquisition Category IV (T) program that will reach Acquisition Milestone III Decision (Production or Fielding/Deployment Approval Manufacturing Development) in May 2003. IOC, NSD, and MSD for CXP are scheduled October 2003.

The MK XII is operated by officers and Operations Specialists assigned to the ship's Combat Information Center (CIC). There are no operator or watchstation billets specifically dedicated to the MK XII. Electronics Technicians (ET) with Navy Enlisted Classification 1572 perform MK XII organizational and intermediate level maintenance. The Space and Naval Warfare System Command Center, San Diego, California, performs depot level maintenance. The CXP will be maintained at the organizational and depot level.

No operator courses are taught exclusively for the MK XII system. System operation is taught as a by-product of the primary mission of CIC Officer and Operations Specialist training courses. MK XII organizational and intermediate level maintenance training is established at the Fleet Training Center (FTC), Norfolk, Virginia. CXP organizational level maintenance training will be added to the existing MK XII Maintenance course at FTC Norfolk. Since the MK XII is a mature system, all manpower requirements are established. No change to existing manpower is required by incorporation of the AN/UPX-37 Digital Interrogator or the CXP.

**AIMS MARK XII IDENTIFICATION FRIEND OR FOE**

**PREFACE**

This Proposed Navy Training System Plan (NTSP) for the AIMS (see below for AIMS acronym) Mark XII Identification Friend or Foe (IFF) system, hereafter referred to as the MK XII, is an update to the Draft AIMS Mark XII IFF NTSP, E-30-7115E/D, dated March 2002. This NTSP complies with guidelines set forth in the Navy Training Requirements Documentation Manual OPNAV Publication P-751-1-9-97.

The AIMS acronym was derived from:

- A - Air Traffic Control Radar Beacon System (ATCRBS)
- I - Identification Friend or Foe
- M - MK XII
- S - Systems (indicating many configurations)

This document incorporates comments from Naval Education and Training Command (NETC) and NAVAIR Codes 3.1.4.1 and 4.5.9.4. The comments are general in nature.

## PART I - TECHNICAL PROGRAM DATA

### A. NOMENCLATURE-TITLE-PROGRAM

1. **Nomenclature-Title-Acronym.** AIMS Mark XII IFF
2. **Program Element.** 64211N

### B. SECURITY CLASSIFICATION

1. **System Characteristics** ..... Confidential
2. **Capabilities** ..... Confidential
3. **Functions** ..... Unclassified

### C. MANPOWER, PERSONNEL, AND TRAINING PRINCIPALS

OPNAV Principal Official (OPO) Program Sponsor ..... CNO (N612)

OPO Resource Sponsor..... CNO (N612)

Developing Agency ..... NAVAIR (PMA213)

Training Agency ..... COMLANTFLT  
COMPACFLT  
NETC

Training Support Agency..... NAVAIR (PMA205)

Manpower and Personnel Mission Sponsor..... CNO (N12)  
NAVPERSCOM (PERS-4, PERS-406D)

Director of Naval Training ..... CNO (N00T)

### D. SYSTEM DESCRIPTION

1. **Operational Uses.** The MK XII is a radar beacon system used by surface ships, submarines, aircraft, and ground forces to identify one another and to distinguish themselves from hostile and neutral forces. The MK XII performs several different functions in support of various missions, such as anti-air warfare, aerial bombardment, naval bombardment, and naval attack. In addition, the MK XII provides aircraft identification and altitude information. Basic operational uses of the MK XII are:

- Anti-Air Warfare using Modes 1, 2, 3/A, and 4 to provide complete identification of airborne platforms
- Air Control using Modes 2, 3/A, and C to provide necessary data for control of friendly aircraft
- Air Traffic Control using Modes 2 and 3/A for aircraft departure and approach control of carrier aircraft
- Surface Identification using Modes 1, 2, 3/A, and 4 for complete identification of friendly surface platforms.

Additionally, transponders aboard aircraft can provide special purpose responses to the shipboard interrogator's operator with special audible and visible warnings. These special purpose replies include different emergency codes indicating an aircraft in trouble, or a communications failure and a special reply for position identification manually activated by the aircraft commander upon verbal request.

Existing IFF transponder and interrogator equipment used by the Navy are beyond their designed service life and suffer from poor reliability and parts obsolescence. Outdated technology adversely affects reliability, maintainability, and availability. The existing analog systems are increasingly difficult to calibrate and maintain, and repair parts are increasingly difficult to procure, resulting in an unacceptable level of mission readiness. Without upgrading these systems, the Navy's IFF capability will become antiquated and inefficient, with ever increasing maintenance and support costs. The need for this upgrade is documented as a part of the Joint Required Operational Capability (JROC) Mission Need Statement for Combat Identification (JROC Memo 027-92 of 13 Apr 92). The majority of fielded IFF transponders, including most of the AN/APX-100 (V) Transponders in tri-service use, do not have Mode S or growth capabilities to upgrade to Mode S. Therefore, the requirement exists to upgrade existing systems to achieve equal or better performance in conjunction with increased reliability, maintainability, and availability.

The CXP is a receiver-transmitter that provides automatic IFF of air or surface vehicles. It provides identification and surveillance reporting in response to challenges from interrogator-equipped airborne or seaborne platforms. The CXP also provides aircraft altitude reporting and tracking data necessary for civil and military air traffic control. The new CXP will continue to provide all functions of the legacy systems with the addition of Mode S Level III that includes Downlink of Aircraft Parameters and interoperation with Traffic Alert and Collision Avoidance System I/II Change 7.0. The CXP will also support future growth to a new secure IFF wave form, MK XII Mode 5, as well as Automatic Dependent Surveillance - Broadcast (ADS-B) receive capability.

**2. Foreign Military Sales.** Other countries currently procure various types and quantities of MK XII components. Additional information concerning MK XII Foreign Military Sales (FMS) is available through Naval Air Systems Command (NAVAIR), Program Manager, Air (PMA) 213.

**E. DEVELOPMENTAL TEST AND OPERATIONAL TEST.** The Chief of Naval Material approved the MK XII for Fleet use in March 1971. The approval was based on the successful Technical Evaluations (TECHEVAL) and Operational Evaluations (OPEVAL) of individual system components. As updated and modified components were incorporated into the MK XII, acceptance tests were performed as necessary.

Developmental Test and Evaluation and (DT&E) on the AN/UPX-37 Digital Interrogator was completed at NAVAIR St. Inigoes, Maryland, in May 1999. Operational Test and Evaluation (OT&E) was completed onboard the United States Ship (USS) George Washington, Aircraft Carrier Nuclear (CVN) 73, in September 1999.

DT&E of the CXP will begin in February/March 2003. OT&E of the CXP will begin in 3<sup>rd</sup> Qtr FY03 aboard the Amphibious Dock Landing Ship USS Whidbey Island (LSD-41). OT&E will be performed by Commander Operations Test and Evaluation Force personnel.

**F. AIRCRAFT AND/OR EQUIPMENT/SYSTEM/SUBSYSTEM REPLACED.** The MK XII replaced the MK X Selective Identification Feature (SIF) System. The MK XII is functionally compatible with the MK X SIF. The AN/UPX-37 Digital Interrogator replaced the analog AN/UPX-25(V) and AN/UPX-27 Interrogators. The CXP will replace the analog AN/UPX-28, AN/APX-64, AN/APX-72, and AN/APX-100 Transponder Sets.

## **G. DESCRIPTION OF NEW DEVELOPMENT**

**1. Functional Description.** The MK XII operates on the challenge-response principle. The system has five interrogation modes that can be used alone or in combination, allowing for several operational functions. The system also serves as secondary radar to assist in tracking friendly forces, especially when radar return is obscured by clutter. Secondary radar is also required for air traffic control use when the target is out of range of the primary radar. Specific modes of operation are:

- Mode 1 - used as directed by field commands with 32 response codes available
- Mode 2 - used for platform identification by a specific airframe or ship with 4,096 response codes available
- Mode 3/A - used for air traffic control identification inside the Continental United States (CONUS) and assigned by the operational command outside of CONUS, with 4,096 response codes available
- Mode 4 - provides secure identification of friendly platforms and is classified
- Mode C - provides barometric pressure altitude of aircraft in 100-foot increments up to +126,700 feet above sea level.

The MK XII is composed of an interrogator (challenge) subsystem and a transponder (reply) subsystem. The interrogator subsystem permits a radar operator to interrogate other platforms and to interpret this data as specific identification of friendly radar targets. The

interrogator subsystem may be either a “Black” IFF or a “Slaved” IFF. A Black IFF is a “stand-alone” interrogator subsystem not associated with any radar system; only IFF returns can be displayed. With a Slaved IFF, the interrogator is synchronized with a radar set. The operator can display IFF only, radar only, or both.

The transponder subsystem accepts a challenge from other platforms and provides the necessary coded replies as identification. The transponder subsystems used aboard ships are aircraft transponder sets adapted for shipboard use. Most large surface ships are equipped with one transponder and one or more interrogators. Smaller surface ships are transponder-only equipped. The MK XII was designed to prevent the transponder from responding to self-interrogation. Components of each subsystem are described below.

**a. Interrogator Subsystem.** The Interrogator Subsystem “questions” weapon system platforms by transmitting an encoded signal to evoke a response for identification. The interrogator subsystem is comprised of:

**(1) Interrogator.** The Interrogator consists of a transmitter and receiver capable of interrogating MK X SIF and MK XII IFF transponders by receiving Radio Frequency (RF) replies. The Interrogator processes these replies into proper video signals that are then applied to decoders and indicators. The interrogator sets include the AN/UPX-25(V), AN/UPX-27, and AN/UPX-37. The new AN/UPX-37 Digital Interrogator contains both AN/UPX-25(V) and AN/UPX-27 functionality and is replacing all AN/UPX-25(V) and AN/UPX-27 Interrogator Systems. The AN/UPX-29(V) Central IFF (CIFF) System is an enhanced IFF system that provides all of the AIMS features, but performs these functions as a stand-alone system. This system will be employed aboard AEGIS and amphibious assault class ships. The AN/UPX-29(V) is not included in this NTSP. For further information refer to the AN/UPX-29(V) Interrogator System NTSP, E-30-7815B/D, dated February 2002.

**(2) Directional Antenna.** The Directional Antenna is capable of generating sum and difference patterns for Interrogation Side Lobe Suppression (ISLS) capability. The AS-2188/U, AS-2189/U, or AS-4328/UPX Directional Antenna is mounted “piggy-back” to the search radar antenna or is slaved to the antenna when mounted on a separate pedestal.

**(3) AS-177( )/UPX Omnidirectional Antenna.** The AS-177/UPX, AS-177A/UPX, and AS-177B/UPX Omnidirectional Antennas provide side lobe suppression when used with the Interrogator, via the AN/UPA-61 RF Switching Group.

**(4) AN/UPA-57 Antenna Pedestal Group.** The AN/UPA-57 Antenna Pedestal Group is required to support and position an IFF antenna when not attached to the radar antenna. This is accomplished by either synchronism to a remote command (slave) input, synchronism to manual command input, or independently at an adjustable continuous rate. The AN/UPA-57 consists of a pedestal assembly, control unit, manual antenna positioning control, and mast switch.

**(5) AN/UPA-61 Radio Frequency Switching Group.** The AN/UPA-61 RF Switching Group provides automatic ISLS RF switching capability that enables a ship's antenna to function alternately as a directional and side lobe suppression antenna in an IFF system. It can also alternate between a directional antenna and an omni-directional antenna. The AN/UPA-61 consists of an electronic switch assembly and control monitor assembly.

**(6) Pulse Generators.** The SG-841/UPX Pulse Generator samples the trigger of the associated radar and ensures the IFF video appears at the correct time. The SG-1066/UPX Pulse Generator is a video retimer that stores, processes, and retimes Mode 4 video signals.

**(7) SN-501/UPX Video Synchronizer.** The SN-501/UPX Video Synchronizer permits optimum operation of the IFF regardless of the many variations in radar timing that may occur. It is capable of interfacing two separate radar systems with one IFF interrogating subsystem when using a common radar antenna system.

**(8) MX-8758( )/UPX Interference Blankers.** The MX-8758/UPX and MX-8758A/UPX Interference Blankers are single channel defruiters that eliminate random non-synchronous signals. These signals appear as unsynchronized replies, or momentary clutter on the radar display, and are referred to as "fruit."

**(9) AN/UPA-59( ) Decoder Groups.** The AN/UPA-59A(V) and AN/UPA-59B are automatic decoding systems that operate in conjunction with interrogators. Each decoder group processes pulse-coded replies received by the interrogator system and provides video outputs to the Planned Position Indicator (PPI) or Naval Tactical Data System (NTDS) display console, and on direct readouts. There are several configurations of the AN/UPA-59( ). These decoder groups basically consist of an alarm monitor, intra-target data indicator, and video decoder.

**(10) C-8430/UPX Master Identification Friend or Foe Control Monitor.** Each interrogator subsystem requires one C-8430/UPX Master IFF Control Monitor to provide controls, indicators, and alarms to the operations supervisor. The C-8430/UPX is located in the Combat Information Center (CIC).

**(11) KIR-1C/TSEC Crypto Computer.** The KIR-1C/TSEC Crypto Computers use the MT-4667/U Computer Base to provide Mode 4 crypto coding for the AN/UPX-27 Interrogators and encrypted decoding of Mode 4 transponder replies.

**(12) KIK-18( )/TSEC, KYK-13, KOI-18-01 Cryptographic Code Keys.** The KIK-18/TSEC and KIK-18A/TSEC Cryptographic Code Key sets the individual cryptographic codes for the KIR-1( )/TSEC and KIT-1( )/TSEC. For the KIR-1C and KIT-1C, the KYK-13 and KOI-18-01 are paper code keys that set the codes.

**b. Transponder Subsystem.** When interrogated, the Transponder Subsystem automatically replies by transmitting an encoded signal. The transponder subsystems use aircraft

transponder sets adapted for shipboard use. The following components are included in the transponder subsystem:

**(1) AN/UPX-28(V) Transponder Set.** The AN/UPX-28(V) Transponder Set is an electrical equipment cabinet that integrates the transponder and its ancillary equipment into a single enclosure.

**(a) Transponder.** The RT859A/APX-72 Transponder is used aboard ships as a receiver-transmitter which, when properly challenged, automatically processes and transmits coded replies. The AN/APX-72 is capable of responding to a single mode, a combination of modes, or all five modes.

**(b) AS-177( )/UPX Omnidirectional Antenna.** The AS-177/UPX, AS-177A/UPX, and AS-177B/UPX Omnidirectional Antennas receive IFF interrogations for processing by the transponder and then radiates subsequent replies. The omnidirectional antenna also operates in conjunction with the AN/UPM-155 Test Set for systems tests.

**(c) PP-6099( )/APX-72 Power Supply Converter.** The PP-6099( )/APX-72 Power Supply Converter is required to convert 115 Volts Alternating Current to 28 Volts Direct Current for the shipboard operation of the AN/APX-72 Transponder Set. Several versions are available for the specific type of transponder.

**(d) C-6280( )/APX-72 Transponder Control Unit.** The C-6280( )/APX-72 Transponder Control Unit is required to provide controls, indicators, and alarms for the transponder system. The controls on the front panel are used to determine the status of the transponder, the reply codes for Modes 1 and 3, and which interrogations require a reply.

**(e) CY-6816/APX-72 Control Enclosure.** The CY-6816/APX-72 Control Enclosure adapts the C-6280( )/APX-72 Transponder Control Unit to shipboard use.

**(f) TS-1843( )/APX Transponder Test Set.** The TS-1843( )/APX Transponder Test Set is an in-line test set that evaluates performance characteristics of the transponder system and provides indications on a “Go” or “No Go” basis.

**(g) KIT-1C/TSEC Crypto Computer.** The KIT-1C/TSEC Crypto Computer decodes interrogations and produces the appropriate coded replies.

**(h) KIK-18( )/TSEC, KYK-13, and KOI-18-01 Cryptographic Code Keys.** As mentioned above under the Interrogator System, one Cryptographic Code Key is supplied per AIMS installation to set individual encrypted codes. Some AIMS installations are transponder-only, in which case the key will be supplied for the KIT-1( )/TSEC Crypto Computer only.

**(i) TD-937( )/SPX Electronic Gate.** The TD-937( )/SPX Electronic (or Suppression) Gate suppresses the transponder when a ship's own interrogators, or other local sources, are transmitting challenges. This prevents the transponder from replying to any interrogators or radar transmissions from its own emissions. Transponder-only ships do not normally include the TD-937( )/SPX.

**(2) AN/APX-117(V) Common IFF Digital Transponder System.** The AN/APX-117(V) CXP System operates on the challenge-response principle. The system responds to interrogation. The transponder is used as part of a secondary radar system. The CXP will operate within the existing frequency spectrum for IFF operations. The AN/APX-117(V) System is intended primarily for shore use accepting 115 Volts Alternating Current (VAC) Input.

**(a) RT-1835/APX-117(V) Transponder Set.** The RT-1835/APX-117(V) Transponder Set is used aboard ships as a receiver-transmitter which, when properly challenged, automatically processes and transmits coded replies.

**(b) C12664/APX Transmitter Control Unit.** The C12664/APX Transmitter Control Unit is used to provide controls, indicators, and alarms for the transponder system. The controls on the front panel are used to determine the status of the transponder and the reply codes, and to select modes.

**(c) MT-7238/APX Electrical Equipment Mounting Base.** The MT-7221/APX Electrical Equipment Mounting Base provides a mount for shipboard and shore station installation of Receiver Transmitter RT-1838(C)/APX 117(V).

**(d) AS-177( )/UPX Omnidirectional Antenna.** The AS-177/UPX, AS-177A/UPX, and AS-177B/UPX Omnidirectional Antennas receive IFF interrogations for processing by the transponder and then radiates subsequent replies. The omnidirectional antenna may also be used in conjunction with the AN/UPM-155 Test Set for systems tests.

**(e) KIT-1C/TSEC Cryptographic Computer.** The KIT-1C/TSEC Cryptographic Computer decodes interrogations and produces the appropriate coded replies.

**(f) J-6615/APX Interconnecting Box.** Provides the interface between the RT-1838/APX-117(V) and other ancillary equipment. This includes readily accessible interconnects for suppression signals and interfaces for KIT-1C/TSEC and C-12665. Jacks for Ethernet and RS-232 are also provided.

**(g) CY-8882/APX Electronic Communications Equipment Case.** Provides a means of installation of Radar Transmitter Control C-12665/APX. Connectorized with some flexibility for installation activity to mount as best fit. J1 provides power and control signals. J2 provides MUTE interface for ship's Electronic Emission Control (EMCON) equipment.

**(3) AN/APX-118(V) Common IFF Digital Transponder System.** The AN/APX-118(V) CXP System operates identically to the AN/APX-117(V) CXP System. The only difference between the two systems is that the AN/APX-118(V) CXP System contains built-in cryptographic capability and does not use a KIT-1C/TSEC Cryptographic Computer.

**(a) RT-1836(C)/APX-118(V) Transponder Set.** The RT-1836(C)/APN-118(V) Transponder Set is used aboard ships as a receiver-transmitter which, when properly challenged, decodes interrogations and produces the appropriate coded replies.

**(b) C12664/APX Transponder Control Unit.** The C12664/APX Transponder Control Unit is used to provide controls, indicators, and alarms for the transponder system. The controls on the front panel are used to determine the status of the transponder and the reply codes, and to select modes.

**(c) MT-17238/APX Electrical Equipment Mounting Base.** Provides a lockable mount for shipboard and shore station installation of Receiver Transmitter RT-1836(C)/APX-118(V) in order to comply with COMSEC requirements. This mount is necessary due to the use of an embedded cryptographic computer.

**(d) AS-177( )/UPX Omnidirectional Antenna** The AS-177/UPX, AS-177A/UPX, and AS-177B/UPX Omnidirectional Antennas receive IFF interrogations for processing by the transponder and then radiates subsequent replies. The omnidirectional antenna may also be used in conjunction with the AN/UPM-155 Test Set for systems tests.

**(e) CY-882/APX Electronic Communications Equipment Case.** Provides a means of installation of Radar Transmitter Control C-12664/APX. Connectorized with some flexibility for installation activity to mount as best fit. J1 provides power and control signals. J2 provides MUTE interface for ship's EMCON equipment

**(f) J-6616/APX Interconnecting Box.** Provides the interface between the RT-1838/APX-117(V) and other ancillary equipment. Converts Ships 115 VAC to 28 Volts Direct Current for equipment usage. Provides readily accessible interconnects for suppression signals and interfaces for KIT-1C/TSEC and C-12665. Jacks for Ethernet and RS-232 are also provided

**3. New Development Introduction.** The MK XII was retrofitted into ships that previously employed the MK X. The MK XII was installed during the production of new acquisitions subsequent to the MK X. The AN/UPX-37 Digital Interrogator is replacing the AN/UPX-27 on a one-for-one basis by retrofitting each system.

**4. Significant Interfaces.** In addition to the various shipboard radars whose trigger format and video processing techniques affect radar-IFF relationships, the MK XII electrically interfaces with other systems and equipment that have an impact on overall radar-IFF system performance. These interfaces include video amplifiers, radar and data distribution switchboards, electronic countermeasure blankers, radar azimuth converters, and PPI displays or NTDS consoles. On NTDS equipped ships, the IFF systems also interconnect through data distribution switchboards, with a video signal simulator used as training equipment and a beacon video processor that interfaces IFF data with the NTDS.

For air traffic control operations, the IFF interfaces with the AN/TPX-42A(V) Carrier Air Traffic Control Center (CATCC) and Amphibious Air Traffic Control Center (AATCC) Direct Altitude Identification Readout (DAIR) Interrogator Set. Other system interfaces include ship's gyro, Radar Environmental Simulation System, and Target Acquisition System radar.

Functional interfaces of the Navy's AIMS include the Air Force's and Army's AIMS and the Federal Aviation Administration's ATCRBS. The MK XII also interfaces with its predecessor, the MK X SIF.

**5. New Features, Configurations, or Material.** There is no new technology associated with the MK XII. However, the new AN/UPX-37 Interrogator and CXP Transponder systems will use digital vice analog technology for transmitting and receiving IFF data. Two additional changes to the MK XII are in the research and development process:

- A new MK XIIA Mode 5 capability that will replace the existing Mode 4
- A Combat Information Center Upgrade (CICU) that will replace the existing AN/UPA-59 Decoder/Remote Control Indicator

When the MK XIIA Mode 5 and CICU programs have been formalized and more information becomes available, the information will be included in updates to this NTSP. For additional information concerning the MK XIIA Mode 5 and CICU programs, refer to the MK XII In-Service Engineering Activity, NAVAIR St. Inigoes, Code 4.5.9.4.

## **H. CONCEPTS**

**1. Operational Concept.** Operator duties for the MK XII consist of energizing and de-energizing the equipment, selecting modes, challenging and interpreting replies, and selecting mode functions at the remote set control. Officers and Operations Specialists (OS) assigned to the CIC and Air Traffic Controllers (AC) perform these actions during air traffic control operations. Surface ships are capable of operating their MK XII systems on a continuous basis.

**2. Maintenance Concept.** The maintenance concept for the MK XII has evolved from its early days. Then, MK XII equipment was repaired at the organizational level by removing and replacing defective piece parts on plug-in assemblies and Printed Circuit Boards (PCB). The organizational level maintenance concept in the Fleet today has evolved to repair MK XII equipment to the card level by removing and replacing the PCBs and Electronic Modules (EM). Piece part repair of PCBs and EMs is accomplished at the intermediate level of maintenance via Microminiature (2M) repair shops. General direction and guidance regarding the maintenance concept for the MK XII is provided by the Ships Maintenance and Material Management (3M) Manual, Office of the Chief of Naval Operations Instruction 4790.4 (series). The 3M Manual prescribes the three level maintenance concept: organizational, intermediate, and depot.

**a. Organizational.** Organizational level maintenance is performed by Electronics Technicians (ET) with Navy Enlisted Classification (NEC) 1572 and consists of preventive and corrective maintenance to the PCB and EM level.

**(1) Preventive Maintenance.** Preventive maintenance includes Built-In Test (BIT) operational readiness tests, periodic inspections, and scheduled maintenance. Preventive maintenance is performed per Maintenance Requirement Cards that are part of the Planned Maintenance System.

**(2) Corrective Maintenance.** Corrective maintenance includes troubleshooting, measuring, aligning, and repairing by removing and replacing defective PCBs and EMs.

**b. Intermediate.** Intermediate maintenance activities, ashore and afloat, perform maintenance actions beyond the capabilities of the organizational activities. These actions are performed by ETs with NEC 1572 and include fault verification, fault isolation using Automatic Test Equipment, and repair of MK XII equipment to the PCB and EM piece part level. These actions are performed by 2M repair shops afloat and Fleet Technical Support Centers ashore. Technical assistance and advisory services for the MK XII are provided by NAVAIR St. Inigoes IFF Systems Branch. No intermediate level maintenance is planned for the CXP.

**c. Depot.** All repairable assemblies beyond the capabilities of intermediate level maintenance, with the exception of the CXP and its components, are forwarded to the Space and Naval Warfare Systems Command Systems Center, San Diego, California, for repair and restoration. Depot level maintenance on the KIR-1C/TSEC and KIT-1C/TSEC is performed at designated cryptographic repair facilities. Depot level maintenance of the CXP will be performed by BAE Systems at its Greenlawn, New York, facility.

**d. Interim Maintenance.** Prior to the Navy Support Date (NSD) scheduled for October 2003, interim maintenance of the CXP is being provided by the NAVAIR In-Service Engineering Activity, St. Inigoes.

**e. Life Cycle Maintenance Plan.** There is no single depot level maintenance plan encompassing the many pieces of equipment that make up the different configurations of the MK XII. However, all failed repairable MK XII components beyond the capability of intermediate level repair (organizational level for the CXP) are forwarded to designated depot level repair sites as identified in the appropriate plan.

**3. Manning Concept.** Operator manpower requirements for the MK XII are determined by the CIC and air operation requirements for each class ship. There are no operator or watch station billets specifically dedicated to the MK XII. Maintenance manpower requirements are driven by the total maintenance workload for a specific configuration aboard a specific ship. The billet structure currently supporting the MK XII will not change as a result of this NTSP.

**4. Training Concept.** The overall objective of the MK XII training program is to provide a ready supply of trained maintenance technicians to the fleet. Initial training has been completed. MK XII follow-on maintenance training is established at Fleet Training Center (FTC) Norfolk, Virginia.

There is no operator course taught exclusively for the MK XII. Operation of the MK XII is taught as a by-product of the primary mission of CIC officer and OS training courses.

The MK XII maintenance course with AN/UPX-37 information will be Ready For Training (RFT) in April 2003. The addition of the AN/UPX-37 information to the MK XII course curriculum increased the course length by ten days.

The MK XII maintenance course will be updated to include CXP information. A target RFT date of July 2003 has been established. The course length may increase until the legacy system training is phased out.

**a. Initial Training.** Initial training for the original MK XII equipment was completed over two decades ago. As new equipment and new versions of equipment that differed significantly from those superseded were developed, initial operation and maintenance training was provided to instructors to ensure technical integrity of follow-on training.

The contractor provided initial AN/UPX-37 Digital Interrogator operation and maintenance training to government DT&E, OT&E, and the initial cadre of fleet personnel.

Initial training for DT&E personnel was completed in April 1999. Initial training for OT&E and cadre fleet personnel was completed in May 2000.

The contractor provided initial CXP operator and maintenance training to government DT&E, OT&E, and the initial cadre of fleet and instructor personnel. All initial training was completed in April 2002.

**b. Follow-on Training**

<b>Title .....</b>	<b>AIMS MK XII IFF System Maintenance</b>
<b>CIN .....</b>	<b>A-102-0062</b>
<b>Model Manager....</b>	<b>FTC Norfolk</b>
<b>Description.....</b>	<p>This course provides training to the Electronics Technician, including:</p> <ul style="list-style-type: none"><li>° AN/UPX-37 Digital Interrogator</li><li>° AS-2188/U, AS2189/U, and AS-4328/UPX Directional Antennas</li><li>° AS-177A/UPX and AS-177B/UPX Omnidirectional Antenna</li><li>° AN/UPA-57 Antenna Pedestal Group</li><li>° AN/UPA-61 RF Switching Group</li><li>° SG-841/UPX Pulse Generator</li><li>° SN-501/UPX Video Synchronizer</li><li>° MX-8758/UPX Interface Blanker</li><li>° AN/UPA-59 Decoder Group</li><li>° C-8430/UPX Master IFF Control</li><li>° KIR-1C/TSEC Crypto Computer</li><li>° KIK-18/TSEC, KYK-13, and KOI-18-01 Crypto Code Keys</li><li>° AN/APX-117/(V) CXP System</li><li>° AN/APX-118/(V) CXP System</li><li>° APX-117(V) Transponder</li><li>° APX-118(V) Transponder</li><li>° C-12664/APX Transponder Control</li><li>° MT-7221/APX Mount</li><li>° AN/UPX/28 Transponder Set</li><li>° PP-6099/APX-72 Transponder</li><li>° TD-937/SPX Electronic Gate</li></ul> <p>Upon completion, the student will be able to perform organizational or intermediate level maintenance on the AIMS MK II in a squadron or shop environment under limited supervision.</p>

Location ..... FTC Norfolk

Length ..... 115 days

RFT date ..... Currently available. July 2003 with CXP included.

Skill identifier ..... ET 1572

TTE/TD ..... Refer to elements IV.A.1 for TTE. TD is Not Applicable (NA).

Prerequisites .....  
 ° A-100-0138, Electronics Technician Core A School  
 ° A-100-0139, Advanced Electronics Technical Core  
 ° A-100-0140, Electronics Technician Strand A School

**c. Student Profiles**

<b>SKILL IDENTIFIER</b>	<b>PREREQUISITE SKILL AND KNOWLEDGE REQUIREMENTS</b>
ET 1572	° A-100-0138, Electronics Technician Core A School ° A-100-0139, Advanced Electronics Technical Core ° A-100-0140, Electronics Technician Strand A School

**d. Training Pipelines. NA**

**I. ONBOARD (IN-SERVICE) TRAINING**

**1. Proficiency or Other Training Organic to the New Development.** Operators use the Program Instruction Handbook for Decoder Group AN/UPA-59A(V)2, NAVELEX 0967-LP-465-5010, and the MK XII IFF Interface Information Guide NA 16-60MKXII-IFM-1 to supplement proficiency training. There is no proficiency or other training for MK XII maintenance since NEC ET 1572 can only be earned by successful completion of training course *A-102-0062, AIMS MK XII IFF System Maintenance*.

**a. Maintenance Training Improvement Program. NA**

**b. Aviation Maintenance Training Continuum System. NA**

**2. Personnel Qualification Standards.** Personnel Qualification Standards (PQS) material has been developed for the MK XII operator training and is contained in the Naval Education and Training Publication 10061 (series). There is no PQS for MK XII maintenance.

**3. Other Onboard or In-Service Training Packages.** Each class of ship has an individualized CIC operator, training package specifically tailored to that ship's Projected Operating Environment.

## **J. LOGISTICS SUPPORT**

**1. Manufacturer and Contract Numbers.** The following contracts are for procurement of the AN/UPX-37 Digital Interrogator and the CXP. There are no other outstanding contracts for MK XII equipment.

<b>CONTRACT NUMBER</b>	<b>MANUFACTURER</b>	<b>ADDRESS</b>
N00019-01-C-0271 AN/UPX-37	BAE Systems	One Hazeltine Way Greenlawn, NY 11740
N00019-00-C-0298 CXP	BAE Systems	One Hazeltine Way Greenlawn, NY 11740

**2. Program Documentation.** The Operational Logistics Support Summary, ATCE-OLSS-007, revised April 1991, was replaced by the User's Logistics Support Summary, ATC-ULSS-007 of 19 March 1996. An Acquisition Logistics Support Plan (ALSP) for the AN/UPX-37 Digital Interrogator, ATC-ALSP-010, was approved in February 2002. An ALSP for the CXP, ATC-ALSP-31-07 was approved in April 2002.

**3. Technical Data Plan.** All required technical manuals are available for the MK XII. Operation and maintenance manuals with Illustrated Parts Breakdown and Maintenance Requirement Cards for the AN/UPX-37 and the CXP are being delivered to each activity during installation. Refer to element IV.B.3 of this NTSP for a detailed list of technical manuals required to support maintenance training.

**4. Test Sets, Tools, and Test Equipment.** All special purpose test sets, special tools, special test equipment, and software required for operational and training activities are in place. Refer to element IV.A.1 of this NTSP for a detailed listing of test sets, tools, and test equipment required to support maintenance training. No new test sets, special tools, or test equipment are required to support the AN/UPX-37 Digital Interrogator or the CXP.

**5. Repair Parts.** The Naval Inventory Control Point (NAVICP), Mechanicsburg, Pennsylvania, has the overall supply support responsibility for provisioning all spare and repair parts for the interrogator system of the MK XII program. The NAVICP, Philadelphia, Pennsylvania, has overall supply support responsibility for provisioning all spare and repair parts for the existing transponder system of the MK XII program. Repair parts for the CXP will be procured through a Performance Based Logistics program monitored and administrated by the

NAVICP Mechanicsburg. The material objective for the MK XII is to apply standard Navy supply support and provisioning policies that provide timely and economical life cycle support.

**6. Human Systems Integration.** Established human engineering principles and practices have been used in the development of the MK XII. These principles guide the design and development of future system functions and features. The design will be directed toward developing and improving effective human performance during MK XII operation and maintenance while making economical demands on personnel, skills, training, and costs. As a minimum, future designs will include:

- Physical measures to preclude interchange of units or components of the same or similar form that are not functionally interchangeable
- Physical measures to preclude improper mounting of units or components
- Measures (e.g., coding) to facilitate identification and interchange of interchangeable units or components
- Physical measures to facilitate preventive and corrective maintenance

## **K. SCHEDULES**

**1. Installation and Delivery Schedules.** The shipboard installations of the MK XII IFF System in various configurations have been completed. Since its inception, changes to original equipment have been made through new and improved replacement components. Updating the MK XII is an ongoing endeavor through the Field Change Modification Program. Fleet-wide, approximately 45 modifications take place each year, depending on the availability of ships and funds. However, there is no master schedule covering these activities. Modifications are affected through the coordinated efforts of Type Commanders, Space and Warfare Systems Command, Naval Sea Systems Command, and NAVAIR, as appropriate. Installation of the AN/UPX-37 Digital Interrogator began in December 2000 and is scheduled for completion in 2009. The contractor will deliver 610 AN/UPX-37 Digital Interrogators a year through 2009. Firm installation and delivery schedules for the CXP are currently under development. When this information becomes available it will be added to updates of this NTSP.

**2. Ready For Operational Use Schedule.** The MK XII was, fleet operational in 1971. The AN/UPX-37 and CXP are Ready For Operational Use upon completion of installation and certification.

**3. Time Required to Install at Operational Sites.** The time required to install new and modified MK XII equipment varies by type of equipment and site of installation.

**4. Foreign Military Sales and Other Source Delivery Schedule.** Delivery schedules for FMS are available through NAVAIR, PMA213.

**5. Training Device and Technical Training Equipment Delivery Schedule.** All Technical Training Equipment (TTE) required to support MK XII maintenance training, with the

exception of the CXP, is currently in place. TTE to support CXP maintenance training will be delivered to FTC Norfolk in March 2003. No Training Devices (TD) are required.

**L. GOVERNMENT-FURNISHED EQUIPMENT AND CONTRACTOR-FURNISHED EQUIPMENT TRAINING REQUIREMENTS. NA**

NAVAIR (Code 4.5.9.4).....	3

**COMMENTS / RECOMMENDATIONS ON THE  
AIMS MK XII IDENTIFICATION FRIEND OR FOE  
DRAFT NAVY TRAINING SYSTEM PLAN**

**ACTIVITY NAME:** Naval Education and Training Command

**COMMENT:** General

No operator courses are taught exclusively for the MK XII system. System operation is taught as a by-product of the primary mission of CIC officer and Operations Specialist training courses. MK XII organizational and intermediate level maintenance training is established at Fleet Training Center, Norfolk, Virginia. In paragraph H.4., the NTSP states, "The MK XII Maintenance course with AN/UPX-37 information will be Ready For Training (RFT) in October 2002. The addition of the AN/UPX-37 information to the MK XII course curriculum will increase the course length by ten days."

Summary: Although the AIMS MK XII is a mature system with long-established training in place, obsolete parts of the system are being replaced with new technology. The executive summary states, "Since the MK XII is a mature system, all manpower requirements are established. No change to existing manpower is required by incorporation of the AN/UPX-37 Digital Interrogator or the CXP." I assume fleet commands will note if there are any manpower problems associated with increasing the length of the AIMS MK XII Systems Maintenance course, A-102-0062, by ten days. Recommend approval.
